

Thank you very much for your interest. I'm sorry for my late message, but I have over 50 questions that I had to answer.

Unfortunately, many inquiries are not relevant and do not match my job description.

Every freelancer here says that he can fulfill my wishes and when I check the portfolio they are mostly bad websites.

Please read this PDF completely and check all links carefully.

please also check all functions, and all attached files. I think you will be able to implement my project.

Most programmers said that the pages I showed were created with these technologies.

She sent me this tool to check it out.

the tool
<https://builtwith.com/>

used technologies
JavaScript, Java EE, PHP Apache jQuery
What's your opinion?

It's like this, I want a website similar to [sixt-neuwagen.de](https://www.sixt-neuwagen.de/),

it should be the same offer. Please don't misunderstand I don't want to copy the page I just want the functions.

there will be several pages on my site.

one page for new cars <https://www.sixt-neuwagen.de/>
a page for used cars <https://www.sixtcarsales.de/>
a page for rent <https://www.sixt-leasing.de/>
a page for rental vehicles <https://www.sixt.de/>

So I want a website where I have all the offers at once. New cars, used cars, leasing and rental cars. As you know, a car market should also be integrated.

No subdomains will be created, I want to integrate them all into my menu, unless this is not possible then I think about it.

You also have to create a car configurator for all vehicle brands, as well as a vehicle search for all brands.

as design and layout i would like to do the same for <https://www.porsche.com/germany/>

the colours should be the same as on the sixt website, namely orange and black.

I've already created a PDF of what my car marketplace should look like, it still needs some optimization, but roughly I want it to be like the PDF I created.

I took <https://mobile.de> and <https://Autoscout24.de> as a reference.

and made my own idea together, it would be good if they would also check these pages to see how everything works.

I also want a vehicle rating system like Autouncle.
here the link

https://www.autouncle.de/en/apps/embedded_selling_reports/new?ref=mobile_menu.

<https://www.autouncle.de/de/autobewertung/new>

The nice thing about this system is that once the customer has entered his data, he automatically receives an e-mail telling him how much his car is worth.

Everything works automatically and this is exactly what I want.

I want to automate as much as possible, it would also be possible to learn a chatbot on maschinelem.

i have explained and described everything as well as possible, if you have any other questions please let me know.

❖ Project understanding:

1) Purpose of the work: CONCOCT A new UNIVERSAL CAR CONFIGURATOR that must work for all automobiles,

Yeah, that's right.

2) I would like to have a AUTO DEALER WEBSITE where I would like to SELL NEW CARS.

New Cars, Leasing Used Cars and Car Rental

HOMOGEN WEBSITE: <https://www.sixt-neuwagen.de/>

Used cars: <https://www.sixtcarsales.de/>

Leasing: <https://www.sixt-leasing.de/>
<https://www.sixt-neuwagen.de/leasing>

Car rental: <https://www.sixt.de/pkw>

3) The DATA PAGES should be similar to:

<https://www.datgroup.com/>

<https://www.auto-data.net>

<https://www.dat.de/silverdat/>

<https://www.schwacke.de/produkt/identifikations-und-spezifikationsdaten-idd/>

Yeah right

and VEHICLE SEARCH as with autoscount24.de

Yeah right

❖ **QUESTIONS:**

1. Will ADMIN verify the user's registration process on your website?

Yes, I want to check it or activate it automatically.

2. Will there be a merchant area set up with the administrator's consent?

Yes, there should also be a dealer area that can be activated manually or automatically.

3. Can I know the payment methods you want to integrate into your website?

Bank transfer, direct debit, PayPal, credit card, do you have an alternative?

4. Is there a rating system?

Yes, there should be a rating system that can be activated automatically or manually.

5. Do you need multilingual and multi-currency functionality for your website?

Yes, I want all the languages that Autoscount24 also uses.

English

Belgian

Spanish

France

Italia

Luxembourg

Netherlands

Austria

Bulgarian

Cesky

English

Hrvatski

Polski

Romanian

Russian

Swedish

Turkish

Ukrainian

Hungarian

6. would you like to use all functions of the following websites on your website at the same time?

- New cars - <https://www.sixt-neuwagen.de>
- Used cars - <https://www.sixtcarsales.de>
- Leasing - <https://www.sixt-leasing.de>
- Rental vehicles - <https://www.sixt.de/pkw>

Yes, I want to use all functions of this website, at the same time

7. do you have the API or membership for the vehicle data on the following websites like

<https://www.auto-data.net>

<https://www.jato.com/germany/our-expertise/automotive-dealerships/>

<https://www.dat.de/silverdat/>

<https://www.schwacke.de/produkt/identifikations-und-spezifikationsdaten-idd/>

etc ..?

No I do not have the data or the API yet, but I have already contacted these pages. They told me that the website has to be created first and that I have to contact them again afterwards.

Designing (UI/UX):

Elegant clear, attractive design such as <https://www.porsche.com/germany/>

and the functionalities color combination (appealing orange & black),

Layout design is done by <https://www.porsche.com/germany/> inspired.

Also follow the instructions you have created. [PDF](#), to design the layout perfectly and completely business-oriented.

I have your other references like <https://www.autoscout24.de/> & <https://www.mobile.de/> and definitely take the idea from these web pages also to make your website appealing.

For the marketplace they take the layout of my created [PDF](#) and the functions of <https://www.autoscout24.de/> & <https://www.mobile.de/>

➤ TECHNOLOGY STACK:

Server-side programming:

PHP 7.3.2 or MEAN Stack (Mongo DB, Express JS, Angular JS, Node JS)

Client-side programming - Bootstrap / HTML5 & CSS & JavaScript (JS makes web pages interactive. There are many JavaScript libraries (like jQuery, React.js and Zepto.js) and frameworks (like Angular, Vue, Backbone and Ember)) for faster and easier web development.)

Database:

MySQL (relational)

MongoDB (not relational, document)

Server Configuration:

>> Apache

>> Nginx

It should be Nodejs or Laravel for the backend

and Angular or React can be used for the frontend. or do they have a better alternative?

what do you think of Codeigniter? What technology would you use and why?

Rating system - Yes will implement the rating system similar kind of

https://www.autouncle.de/en/apps/embedded_selling_reports/new?ref=mobile_menu

rate calculator

<https://t1p.de/27nz>

<https://t1p.de/bsjz>

Vehicle Configuration:

Implementation of finance & vehicle calculator similar like

<https://www.sixt.de/pkw>,

<https://t1p.de/27nz>,

<https://t1p.de/jgk5>

Vehicle comparison calculators:

Comparison calculator for Car Loan, Car Rental, Car Insurance & Price Comparison etc.

These functions are affiliate programs and only need to be inserted into the website via a code.

I would also like a tyre/failure configurator on my website.

<https://t1p.de/jgk5>

<https://t1p.de/ceaz>

<https://t1p.de/71ik>

I would also like to integrate several vehicle comparison calculators into my website.

Car loan comparison

<https://t1p.de/ha2c>

Rental car price comparison

<https://t1p.de/moxk>

Traffic legal protection in comparison

<https://t1p.de/67gl>

Car insurance and automobile club comparison

<https://t1p.de/elwr>

auto insurance comparison

<https://t1p.de/954h>

tire price comparison

<https://t1p.de/v532>

Compare car parts

<https://t1p.de/emsy>

Now we come to the FEATURE

LIST part: (Based on the original assumption of my project understanding, I have compiled this feature list roughly. It may be that I didn't create it perfectly. if any functions on the reference pages have been forgotten, please add them)

<<Customer's End>>

- Sign up
 - ☐ First name
 - ☐ Last name
 - ☐ Contact number
 - ☐ Email address
 - ☐ Password
- Log in
 - ☐ Email address
 - ☐ Password

- Advanced Inventory Manager
 - Pay Per Listing System
 - Rent a Car - Discount system.
 - Rent a Car - Special prices for certain periods.
 - Rent a Car - Prices per hour.
 - Rent a Car - Custom date format for the calendar.
 - Email Template Manager.
 - Automanager XML Inventory Import
 - stock list templates
 - Adjustable vertical and horizontal banners
 - CSV / XML import from inventory
 - Sell a car feature
 - Embed Audio & Video
 - Comparison of several vehicles - side by side for 2, 3 or 4 vehicles
 - Similar vehicles - includes a custom widget to display similar entries
 - Users can immediately change the views of vehicle lists
 - Printable brochures for inventory lists - PDF page creation at the click of a mouse
 - SEO Enhanced
 - GDPR Conformity - Conformity with the General
 - Data Protection Ordinance (GDPR)
 - Dashboards with Google Analytical Tools
 - Facebook Pixel integration (facebook Analytics)
 - Logging: Log function provided in admin for import and export.
 - Dealer enquiry forms : Six dealer enquiry forms with captcha and validation, three types of e-mail functions (ADF, HTML and text) and the input for each enquiry form are managed on the administrator page in the "Enquiries" menu.
 - GEO-Fencing: [GEO fencing functionality](#) for target-oriented location customers with Best
 - Deals using smartphone technology.
 - Promocode: Promocode offers for targeted advertising.
-
- AJAX-based URL rewriting: This functionality is useful for accessing the extensive collections of information and resources on the Web. You can copy and share these URLs with your friends or use them to create links from an HTML document. If you copy the URL generated in the browser after you run a filter for cars and paste it into other tabs or browsers or other devices such as tablets, cell phones, etc., you get the same result as when you run the filter. By sharing this URL, you can promote this car. You can also use this URL to create campaigns for the car.

References:

Please check all links and attachments I send you.

Administration Menu:

1. the administrator has all the controls for the website
2. manage users
3. manage vehicle data
4. manage providers
5. manage contents

Panaroma View:

Please watch the video on this page, and the hotspots function. If you click on it, a window with a description will open.

The video function, where the interior of the car is shown in different versions, I find very nice.

Integrate the panorama view similar to <https://panographer.de/360-car-interior/>

Car market:

1. integrate car marketplace
2. providers can create lists
3. users can view and buy the list
4. the provider may become a member in order to place advertisements

Admin Panel:

1. admin will have all of the controls for the website
2. Manage Users
3. Manage Car data
4. managing vendors
5. management contents

I thank you in advance for your time and effort and look forward to hearing from you.
